

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1.     *(Original)* A method of data driven web page creation comprising the following steps:
  - presenting a first screen for receiving attribute category information;
  - presenting a second screen for receiving attribute group information;
  - presenting a third screen for receiving attribute information;
  - presenting a fourth screen for receiving attribute to attribute group association information and
  - creating a web page using the attribute category, attribute group, attribute, and attribute to attribute group association information.
2.     *(Original)* The method as claimed in claim 1 wherein the first screen further receives a column specification.
3.     *(Original)* The method as claimed in claim 2 wherein the column specification includes the number of columns and column orientation.
4.     *(Original)* The method as claimed in claim 1 wherein the attribute category information includes category ID, category name, column number, and table orientation information.
5.     *(Original)* The method as claimed in claim 1 wherein the attribute group information includes category ID, group ID, group order, and group name information.

6. (Original) The method as claimed in claim 1 wherein the attribute information includes attribute ID, attribute type, and attribute name information.

7. (Original) The method as claimed in claim 1 wherein the attribute to attribute group association information includes group, attribute, attribute order, and default value information.

8. (Original) A computer system for data driven web page creation comprising:

a processor for receiving and transmitting data; and

a memory coupled to the processor, the memory having stored therein sequences of instructions which, when executed by the processor, cause the processor to present a first screen for receiving attribute category information, present a second screen for receiving attribute group information, present a third screen for receiving attribute information, present a fourth screen for receiving attribute to attribute group association information, and create a web page using the attribute category, attribute group, attribute, and attribute to attribute group association information.

9. (Original) The computer system as claimed in claim 8 wherein the attribute category information includes category ID, category name, column number, and table orientation information.

10. (Original) The computer system as claimed in claim 8 wherein the attribute group information includes category ID, group ID, group order, and group name information.

11. (Original) The computer system as claimed in claim 8 wherein the attribute information includes attribute ID, attribute type, and attribute name information.

12. (Original) The computer system as claimed in claim 8 wherein the attribute to attribute group association information includes group, attribute, attribute order, and default value information.

13. (New) A computer-readable medium storing instructions which, when executed by a processor, cause the processor to perform the method of claim 1.
